## **CLAIMS**

What is Claimed is:

1	1. A method of standardizing character information in electronic documents
2	comprising the steps of:
3	comparing a font used in an electronic document to a font within a target
4	replacement font set in order to automatically generate a font comparison table for
5 5 1	use during actual font replacement;
6	presenting said font comparison table to a user;
	said user amending errors in said font comparison table; and
8	actually replacing said font used in said electronic document based on said
9	font comparison table as amended.
Ť	2. The method of standardizing character information in electronic documents of
2	claim 1, wherein said step of comparing further comprises:
3	inputting an electronic source document;
4	inputting a font set used in said electronic source document;
5	inputting a target standardization font set;
6	inputting a comparison table made in a previous conversion;
	\

inputting font object information to describe a rule set to limit objects of character comparison and a rule set related to mapping for each kanji radical; and outputting a font comparison table candidate list.

- 3. The method of standardizing character information in electronic documents of claim 2, further comprising the step of:
- outputting weighting information regarding mapping between similar characters as a reference file.
- 4. The method of standardizing character information in electronic documents of claim 2, wherein said font comparison table candidate list takes as elements groups comprising one character within a source font and a plurality of characters within a target font compatible with said source font.
- 5. The method of standardizing character information in electronic documents of claim 4, further comprising adding priority level information for said plurality of characters within said target font.
- 6. The method of standardizing character information in electronic documents of claim 1, wherein the font comparison table is a list taking as elements a

corresponding relationship between a group of a source font set and character code within this source font set and a group of a target font set and character code within this target font set.

- 7. The method of standardizing character information in electronic documents of claim 1, wherein said step of comparing is carried out automatically using Optical Character Recognition (OCR) technology.
- 8. The method of standardizing character information in electronic documents of claim 1, wherein said step of amending errors in said font comparison table further comprises the steps of:

displaying a candidate list for the font comparison table for every entry; and said user selecting one character from said candidate list.

9. The method of standardizing character information in electronic documents of claim 1, wherein a font comparison table and a rule set describing a structure of a source electronic document are input and standardization of fonts and character code used in said source electronic document are carried out in said step of replacing said font.

- 1 10. The method of standardizing character information in electronic documents of
- 2 claim 1, wherein said font set to be provided as a replacement font is a font set of
- 3 the Unicode font.
